

FOREWORD

Subsequent two issues of the International Journal of Bioelectromagnetism include a collection of articles, which are based on presentations given in the 10th International Congress on Bioelectromagnetism in Tallinn, Estonia 16.-18. June 2015. This 10th ICBEM was dedicated to the memory of Professor Robert Plonsey (1924-2015) who was a prominent scientist in bioelectromagnetism and Honorary President of the International Society for Bioelectromagnetism.

The conference participants came from Europe and United States and the program included papers from all fields of bioelectromagnetism. A special session in the memory of Robert Plonsey was also arranged. In this session there were four presentations, two of them were given on video by colleagues from the USA. Detailed information on the 10th ICBEM may be found from the ISBEM website at www.isbem.org.

In this connection I want to thank all the authors of the articles of these two issues of IJBEM and Professor Kazuo Yana, Editor in Chief for editing these issues. I also want to thank professor Mart Min, President of the conference and Liisa Parv, Chairperson of the organizing committee and other persons contributing to the success of the conference. The 10th ICBEM and these issues of IJBEM demonstrate the importance of bioelectromagnetism in science. Also, because being devoted to the memory of Robert Plonsey, they conclude one era in this discipline.

Jaakko Malmivuo, Professor

Aalto University

School of Electrical Engineering

Department of Electrical Engineering and Automation
